

**Effective February 1, 2015**

**UUP's Active and Retiree vision benefit offers NEW enhancements to choose from with an additional copayment. Our members can upgrade their eyeglasses for a fraction of the retail cost.**

**Premium AR Coating: \$15 copay**

Premium AR offers reduced internal and external reflections. Plus, these lenses are easy to clean, safer and more impact resistant than standard AR lenses.

**Ultra AR Coating: \$27 copay**

Ultra AR offers the best in anti-reflective lenses, including exceptional visual clarity and the virtual elimination of reflections and glare. They are easy to clean; they repel water, dirt and fingerprints better; and they provide improved scratch resistance and enhanced UV Protection.

**Ultra/Digital Progressive: \$50 copay**

Ultra/Digital progressives offer exceptional comfort with highly accurate lenses, custom designed to the wearer's prescription. They provide enhanced visual clarity with high definition material and premium anti-reflective properties.

**High-Index Lenses: \$55 copay**

Is there an alternative to plastic lenses? High-index lenses are comprised of a dense material, resulting in thinner and lighter lenses than those produced from plastic. High-index lenses are especially useful to those with strong prescriptions, creating eyeglasses that are comfortable to wear without the awkward look of thick lenses.

**Polarized Lenses: \$60 copay**

Polarized lenses are used in sunglasses and provide wearers with a filter to eliminate the horizontal glare experienced from reflective surfaces, such as water or the road's surface. Polarized lenses can also be worn indoors to protect light-sensitive individuals from light exposure. These lenses are recommended for patients with eye conditions such as cataracts and age-related macular degeneration.

**Plastic Photochromic Lenses: \$70 copay**

Plastic Photochromic lenses are light-sensitive and darken when they are exposed to ultraviolet rays. The most common brand is called Transitions® adaptive™ lenses. Generic versions are called "photochromic" or "photosensitive" lenses. These lenses provide the wearer protection from the harmful effects of the sun.

**Please see other side for pricing details.**
